

## Features

- Floating channel designed for bootstrap operation
- Fully operational up to +200 V
- Tolerant to negative transient voltage, dV/dt immune
- Gate drive supply range from 10 V to 20 V
- Independent low-side and high-side channels
- Input logic HIN/LIN active high
- Undervoltage lockout for both channels
- 3.3 V and 5 V input logic compatible
- CMOS Schmitt-triggered inputs with pull-down
- Matched propagation delay for both channels
- RoHS compliant

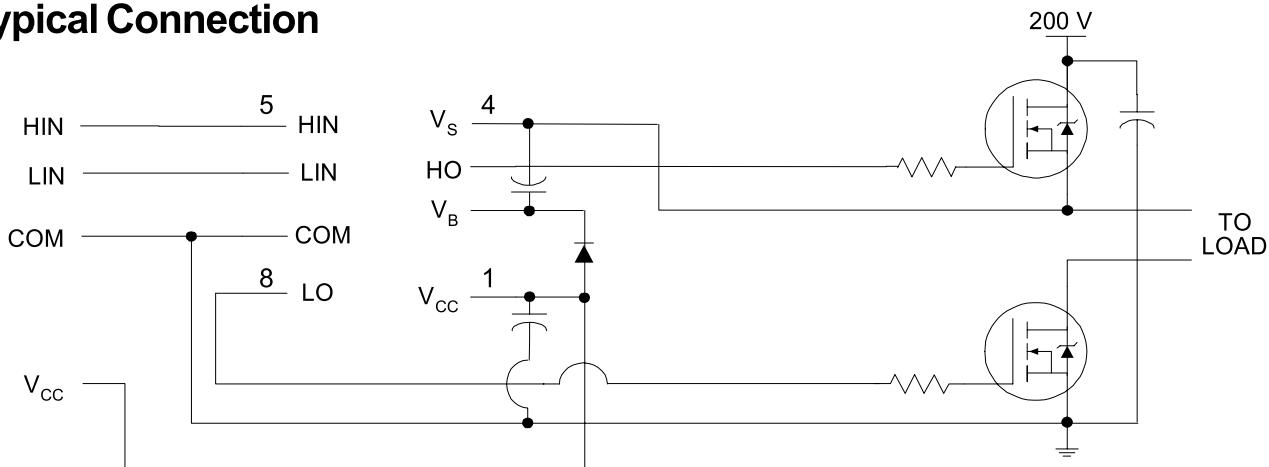

## Applications

- Audio Class D amplifiers
- High power DC-DC SMPS converters
- DC motor drive

## Description

The IRS2011 is a high power, high speed power MOSFET driver with independent high and low-side referenced output channels, ideal for Audio Class D and DC-DC converter applications. Logic inputs are compatible with standard CMOS or LSTTL output, down to 3.3 V logic. The output drivers feature a high pulse current buffer stage designed for minimum driver cross-conduction. Propagation delays are matched to simplify use in high frequency applications. The floating channel can be used to drive an N-channel power MOSFET in the high-side configuration which operates up to 200 V. Proprietary HVIC and latch immune CMOS technologies enable ruggedized monolithic construction.

## Typical Connection

(Refer to Lead Assignments for correct configuration). This diagram shows electrical connections only.  
Please refer to our Application Notes and DesignTips for proper circuit board layout.

## Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

Note 1: All supplies are fully tested at 25 V and an internal 20 V clamp exists for each supply.

## Recommended Operating Conditions

For proper operation the device should be used within the recommended conditions. The  $V_S$  and COM offset ratings are tested with all supplies biased at a 15 V differential.

| Symbol   | Definition                                 | Min.       | Max.       | Units |
|----------|--------------------------------------------|------------|------------|-------|
| $V_B$    | High-side floating supply absolute voltage | $V_S + 10$ | $V_S + 20$ | V     |
| $V_S$    | High-side floating supply offset voltage   | Note 2     | 200        |       |
| $V_{HO}$ | High-side floating output voltage          | $V_S$      | $V_B$      |       |
| $V_{CC}$ | Low-side fixed supply voltage              | 10         | 20         |       |
| $V_{LO}$ | Low-side output voltage                    | 0          | $V_{CC}$   |       |
| $V_{IN}$ | Logic input voltage (HIN & LIN)            | COM        | 5.5        |       |
| $T_A$    | Ambient temperature                        | -40        | 125        |       |

Note 2: Logic operational for  $V_S$  of -5 V to +200 V. Logic state held for  $V_S$  of -5 V to  $-V_{BS}$ .

## Dynamic Electrical Characteristics

$V_{BIAS}$  ( $V_{CC}$ ,  $V_{BS}$ ) = 15 V,  $C_L$  = 1000 pF,  $T_A$  = 25 °C unless otherwise specified. Figure 1 shows the timing definitions.

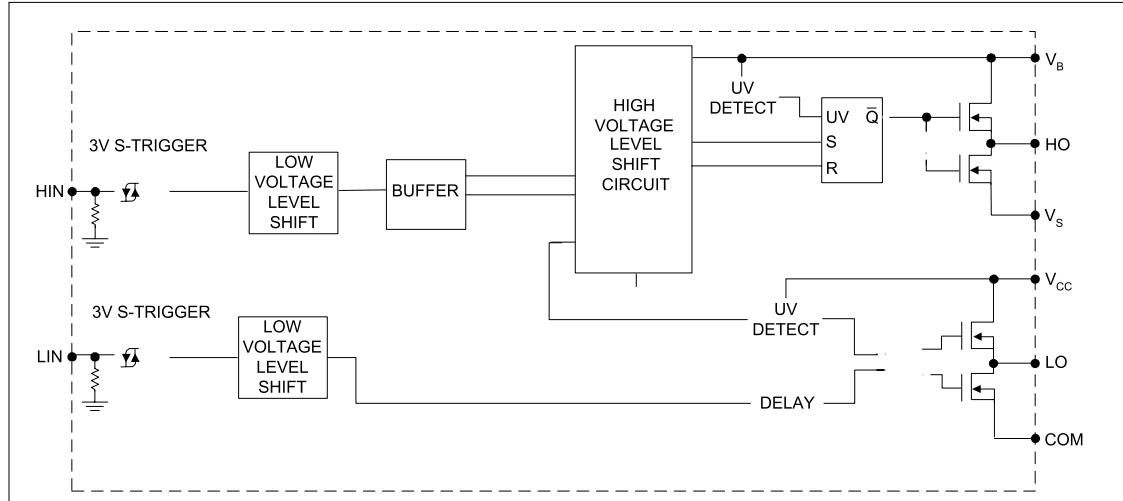

| Symbol    | Definition                                          | Min. | Typ. | Max. | Units | Test Conditions |

## Static Electrical Characteristics

$V_{BIAS}$  ( $V_{CC}$ ,  $V_{BS}$ ) = 15 V, and  $T_A$  = 25 °C unless otherwise specified. The  $V_{IN}$ ,  $V_{TH}$ , and  $I_{IN}$  parameters are referenced to COM and are applicable to all logic input leads: HIN and LIN. The  $V_O$  and  $I_O$  parameters are referenced to COM and are applicable to the respective output leads: HO or LO.
