## Fixed power wirewound resistors

 **OATE** ELECTRONICS

# WIREWOUND RESISTORS - SILICONE

## COATED SERIE CS

### FEATURES

Easy replacement of vitreous enamel resistors with no cost increase and no performance loss. The whole assembly is coated with multi-layer silicone coating to give maximum wire protection from -55°C to +350°C.

Performance improvement is obtained by close tolerance, very low temperature coefficient and excellent stability in operation under severe environmental conditions.

High level reliability due to ceramic core chemically inert and centerless ground for uniformity, selected wire element and completely welded construction terminal to terminal.

### SPECIFICATIONS

These resistors meet or exceed the requirements of MIL-R-26E specification.

### ELECTRICAL

Resistance range

See table. Consult factory for values lower (up to R01) and higher than indicated.

Tolerance

standard 5% Available on request up to 1%

Temperature coefficient

Typical values; 30 to 100 ppm/°C from R10 to Rmax. Consult factory for special applications.

Dielectric strength

1.000 Vac for all types.

Insulation resistance

1.000 MOhms minimum dry

100 MOhms after moisture test.

Overload

5 sec. at 10 times rated power

5 sec. at 5 times rated power 2CS and 3CS

Non inductive

Models of equivalent physical and electrical specifications are available with non inductive

Ayrton-Perry winding.

### MECHANICAL

Terminal strength

10 lb. pull test

Solderability

Continuos, satisfactory coverage when tested in accordance to MIL-R-26E.

### MATERIAL

Core

Ceramic steatite or alumina centerless ground.

Resistive element

Copper-nickel alloy or nickel-chrome alloy at specified temperature coefficient.

End caps

Stainless steel.

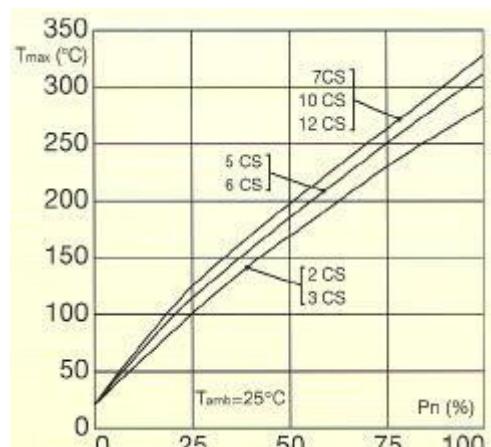

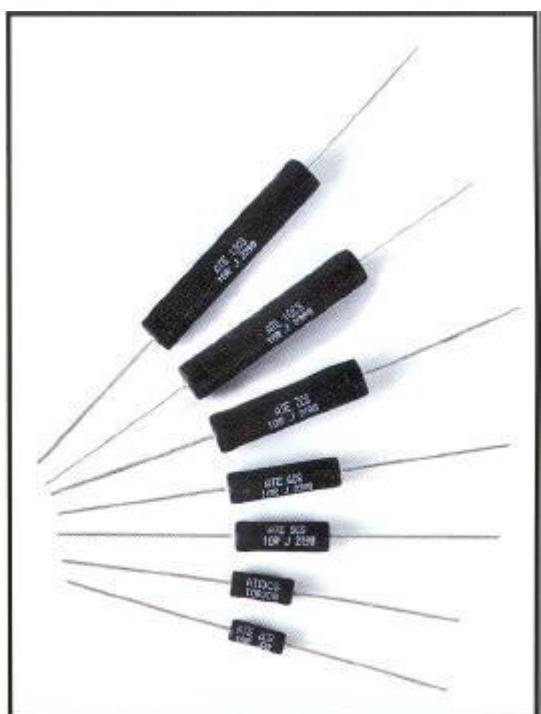

Coating - Special high temperature silicone.

Standard terminals - Tinned copper or tinned copperweld.

### DERATING

These resistors could be used in a temperature range from -55°C to +350°C.

To use these components in settings with base temperature upper to +25°C you have to made a power reduction with linear derating from nominal power to 0 at +350°C.

ATE type	Type Mil-R-26E	Rated power (W)	Resistance range (Ohm)	Max volt. working(V)	Temperature rise (°C/W)	Weight (Gr)	Dimensions

FIXED POWER WIREWOUND RESISTORS  
ALUMINIUM HOUSED

SERIE RB

## FEATURES

Extruded aluminium housing provides superior heat conduction.  
Housing deep finned for maximum heat dissipation at natural or forced air convection.  
Gold anodized finish for maximum resistance to environmental conditions.  
Special molding compound with high thermal conductivity  
Winding designed to give maximum core coverage and uniformity for even heat dissipation.  
Core centerless ground for maximum winding uniformity.  
Marking at top surface for easy identification after mounting.  
Complete welded construction terminal to terminal.

## SPECIFICATION

These resistors meet or exceed the requirements of MIL-R-18546 E specification.

## ELECTRICAL

For Power ratings and Resistance values: see table.

Tolerance: the following tolerances are available:

1%, 3%, 5%

Temperature coefficient

30 ppm R > 20 Ohm

50 ppm 1 Ohm < R < 20 Ohm

100ppm 0.1 Ohm < R < 1 Ohm.

Dielectric strength

1.500 Vac for RB5 / RB10

2.500 Vac for RB25 / RB50

3.500 Vac for RB75 / RB101 / RB150

4.500 Vac for RB100 / RB 250.

Insulation resistance

10.000 MOhms minimum

1.000 MOhms after moisture test.

Overload 5 sec. at 5 times rated power.

Non inductive

Models of equivalent physical and electrical specifications are available

## MECHANICAL

Terminal strength  
10 lb, pull test.

Solderability

Satisfactory when tested in accordance with method 208 of MILSTD-202

The use of high temperature solder is recommended when resistors are operated near the maximum specified ratings.

## MATERIAL

Core

Ceramic steatite or alumina centerless ground.

Element

Copper-nickel alloy or nickel-chrome alloy of determined temperature coefficient.

End caps

Stainless steel.

Encapsulant

High temperature silicone transfer molding compound.

Housing

Aluminium with hard anodic coating

Standard terminals

Copperweld RB5 to RB150.

Stainless steel for RB100 and RB250.

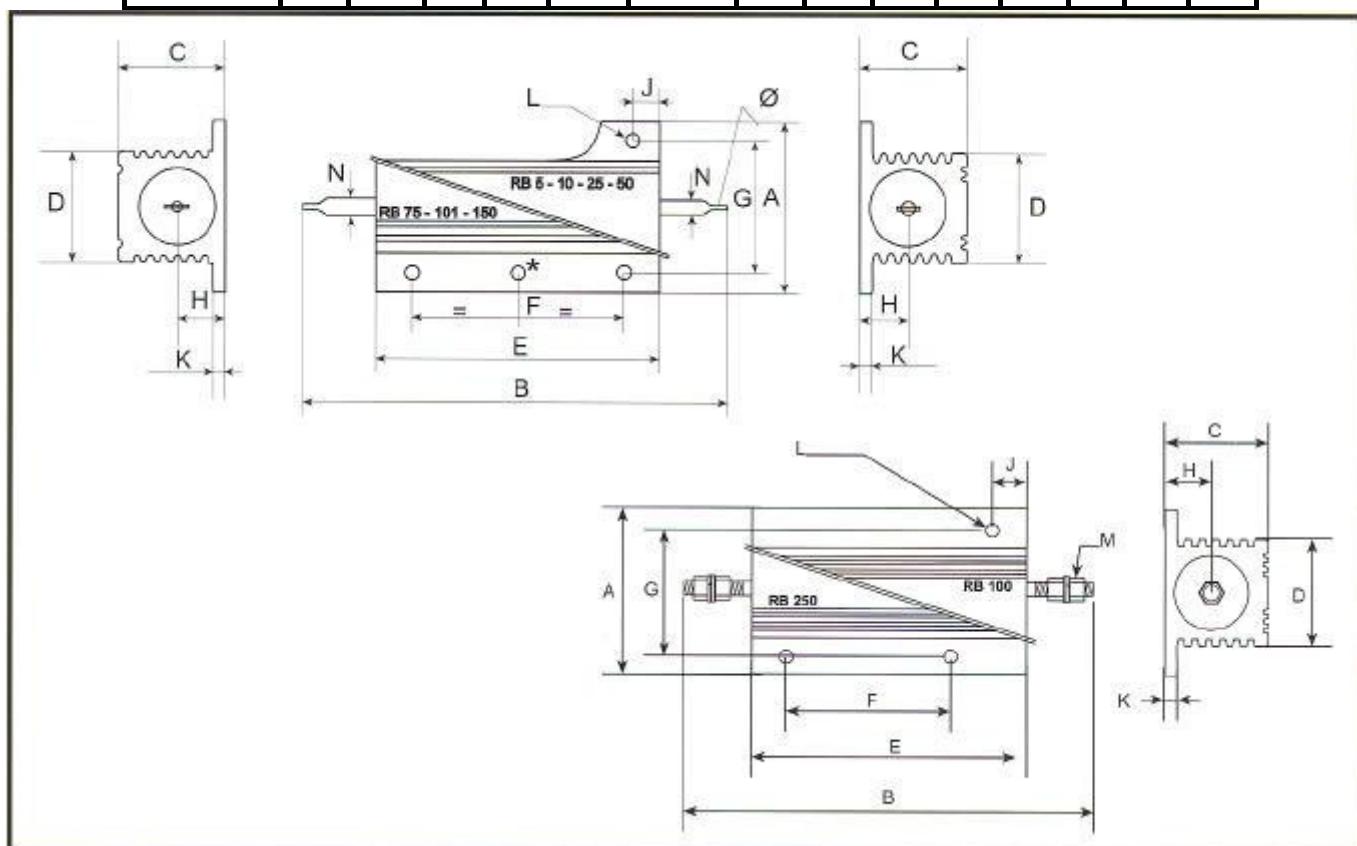

## DERATING

ATE RB resistors have an operative temperature range of -55 °C to +250 °C.

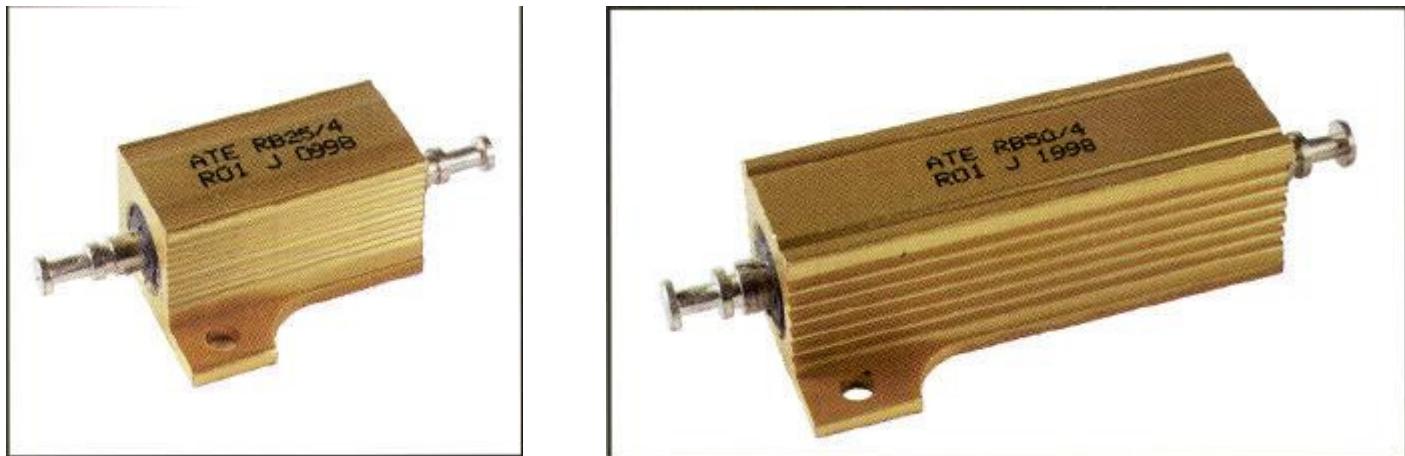

Derating is required for reduced chassis area and for high ambient temperature.

# ANTI MOISTURE DEVICES DAT 50 . DAT 100 . DAT 150 TYPES SERIE DAT

POWER DISSIPATED IN FUNCTION OF THE EXTERNAL TEMPERATURE

POWER (W)

## CHARACTERISTICS

One of the main causes for electrical troubles on electrical and electronic sets is due to the moisture which is formed on components during variation of the ambient temperature.

A simple and economic way to avoid any trouble of this kind, consists on application of anti-condensation devices (Heaters) which maintain the temperature inside the enclosure some degrees higher than the ambient temperature in order to prevent moisture condensation.

The Heater DAT 50, DAT 100 and DAT 150 have been developed for this specific use.

Their main features are as follow:

Surface temperature limited to 70°C allows assembling without problems. A thermoswitch permits maximum power at very low temperatures, then reduces the power dissipated till turn off the devices at +55°C.

The DAT models are provided with simple clip mounting for 35mm DIN rail. Use of power wirewound resistors, under MIL-R-1 8546 D specs., increase reliability and suitable supply voltage.

## ELECTRICAL CHARACTERIS-

### TICS:

**Max power ratings:**

DAT 50 = 50 W

DAT100 = 100W

DAT150 = 150W

**Voltage supplied:**

Standard 220 Vca ±20%. on request any voltage supplied from 24 to 220 Vca

2.000 Vca for any type

1.000 MOhm minimum at 500

...

**Dielectric strength:**

2.000 Vca for any type

**Insulation resistance:**

1.000 MOhm minimum at 500

...

$$P = A \times \Delta T \times K$$

A - Console external surface ( $m^2$ )

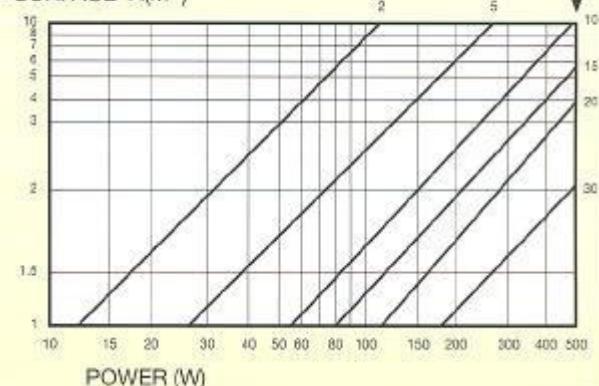

$\Delta T$  - temperature difference ( $^{\circ}C$ )

K = 3.5 W/ $m^2$  for plastic console

K = 5.5 W/ $m^2$  for iron plate (closed room)

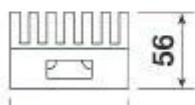

POWER OF THE ANTI-MOISTURE DEVICES IN FUNCTION OF EXTERNAL SURFACE AND TEMPERATURE JUMP REQUESTED

SURFACE A( $m^2$ )

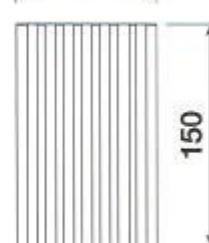

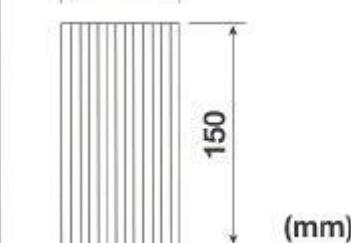

## DIMENSIONS

### DAT 50

### DAT 100/150

## THICK FILM POWER RESISTORS

## SERIE PRI 00

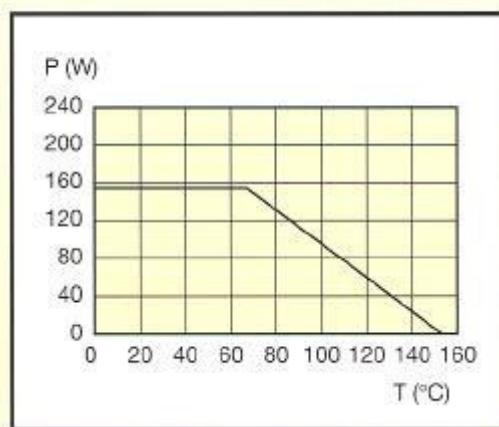

### FEATURES

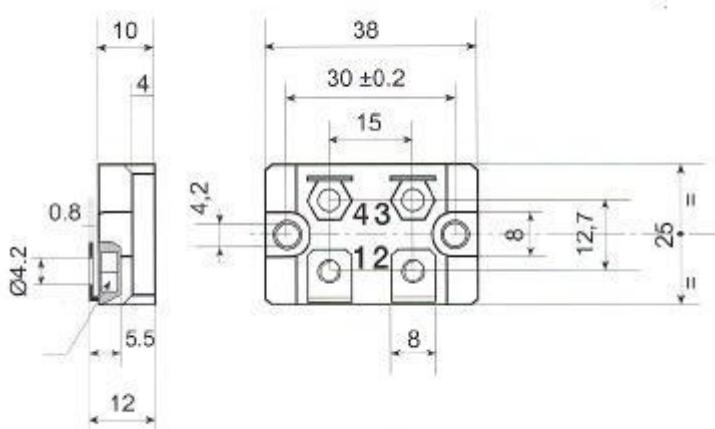

Very good ratio Power/Volume.  
Easy mounting and wiring with significant cost advantages.  
Non inductive performance for high frequency applications.  
One model for power from 20W to 200W.  
Suited to UL94-VO application.  
SOT227 configuration.

Power rating:	100 W
Max power not trimmed:	150 W (heatsink at 70 00)
Resistance range:	From 1R0 to 100K serie E6
Tolerance:	Standard $\pm 10\%$ up to 1% on request
Temperature coefficient:	100 ppm/ $^{\circ}\text{C}$
Max Work. Voltage:	500 Vac
Work Temp. Range:	55 00 to +155 $^{\circ}\text{C}$
Dielectric Strength:	2.500 Vac
Insulation resistance:	> $10^5$ MOhm at 500V
Partial discharge:	<80 pC/2.000 Vac (only on request)
Self inductance:	40 nH
Capacitance/Mass:	<45 pF
Overload:	2 Pn x 10 sec.
Thermal resistance:	0.5 $^{\circ}\text{C}/\text{W}$
Heatsink flatness:	0.05 mm Max
Heatsink surface finish:	6.3 $\mu\text{m}$ Max
Thermal grease:	Required
Max torque for contact:	1.2 Nm (static)
Max torque for mounting:	1.5 Nm (static)
Weight:	18 gr. (PR1 00/1 01) 24 gr. (PR1 02/103)

*Setting the Industry Standard*

UPE, Inc. was founded in 1990 to serve the power electronics industry in the United States and Canada with electrical products that represent the latest technology.

With headquarters in Richfield, Ohio, UPE maintains and ships product from this location. UPE, Inc. is the exclusive agent for BHC/EVOX-RIFA power electrolytic capacitors, Arcotronics film capacitors, Electronicon film capacitors, and ATE resistors.

UPE is also the exclusive agent for the High Power Circuit Board Technology worldwide.
